

Pumps for tractors : **Solution For Irrigation Problems**

Two thirds of the work force in India is dedicated to agriculture, so irrigation is a key issue for good farming practices.

One of the most effective ways to satisfy agricultural water needs is to rely on the simplicity and efficiency of pumps with overgear connected to a tractor.

The advantages of tractors appear obvious and clear: they can be moved rapidly towards the area to be irrigated, they can reach areas where it is difficult to install an irrigation system, they have very low operating costs and, last but not least, they are extremely reliable and robust.

Pumps with overgear for tractors are quick and easy to setup to begin irrigating in minutes, mounted on smart two-wheeled trolley or on a three-point linkage.

Within its wide range, Rovatti Pompe can offer over 30 models of centrifugal pumps with overgear for tractors, for low, medium and high heads at different capacities in order to suit all types of irrigation systems.

Furthermore all Rovatti pumps with overgear for tractors have a unique water circulation cooling system to ensure the gearbox remains cool at all times, even after prolonged operation.

This allows greater safety and longer life of the gearing, even if the pump is working in challenging environmental conditions.

Rovatti pumps with overgear for tractors are already successfully used in many European countries, U.S. and China, where they are considered to be leading products in their field.

All Rovatti pumps are manufactured with high quality materials and

are the result of more than 50 years of consolidated experience, in the continuous attempt to reach the highest technical standards.

We are confident that the Rovatti pumps with overgear for tractors will satisfy any of your

pumping needs and prove themselves to be the ideal equipment for your crops.
